

SUPPLEMENTAL M.S. DEGREE IN APPLIED STATISTICS

Doctoral students may elect to fulfill the requirements for the applied M.S. degree in statistics offered by the Department of Statistics.

See: <http://www.stat.illinois.edu/degrees/applmasters.shtml>

You must receive prior approval from that department's Director of Graduate Studies.

Please note that a course used to fulfill a requirement for one degree program may not be used to also fulfill a requirement in another degree program. For students electing this option, at least half the courses taken during each of the first two years must be courses that will be used to fulfill HDFS requirements. Students must petition the Graduate College to transfer to the Statistics graduate program during the semester the M.S. is awarded, and petition to have statistics courses taken while enrolled in the HDFS program count toward the statistics degree.
